

Using Pine Pellet Litter (Arm and Hammer Feline Pine) George Ruwisch

Begin with fresh litter (notice I use the Jenny highly recommended cement tub)

24 hours later with two Ragdoll Kittens
Notice how many of the pellets have turned to sawdust)
I have my nose less than 6 inches from the litter and smell
absolutely NO urine odor.

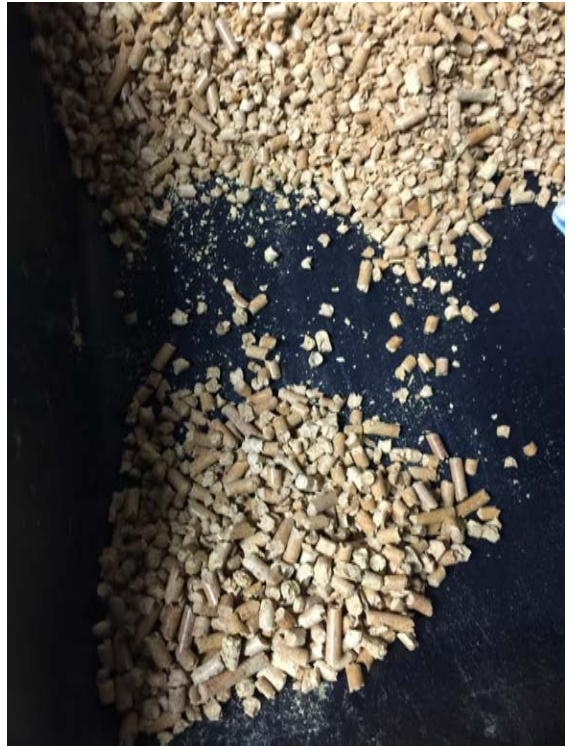

Dig around and remove feces

Push all litter to one side

Use a standard scoop and sift
Small portions over trash can.
This gets rid of urine sawdust.

Dump sifted litter into empty side of box.

Repeat sifting until all litter has been sifted. You may run into some missed feces during this step. When you get to the end you can scoop the rest directly into the can.

Replace used litter with clean litter (Use a separate Scoop for this part. I keep my litter in a large dog food container for convenience.

My Blue Mitted Ragdolls Jazzy and Blue Man at 1 year old

Breeder and person who started me on pine litter is
Ms. Maria Grimm
